# MIAE 215 Quiz #2

Please write the following programs using your compiler or a text editor. Then submit the cpp file for your program on Moodle. Don't submit any other files. You should also check your cpp file before submitting it using a text editor such as Notepad++.

If you can't find your cpp file then you should look for it in all folders of your project. You could also save the file from your compiler / IDE to the desktop and look for it there. Worst case scenario you can cut and paste your program into another text file.

You have from 8:45 am to 9:50 am (65 minutes) to complete the quiz and another 5 minutes submit.

All submissions are due at 9:55 am (except ACSD students). Late quizzes will not be accepted.

If you are not sure about a question, please state your assumptions / interpretation and proceed to solve the problem based on your assumptions.

Write a program that:

a) Inputs two 1D arrays of doubles A[i] and B[i] from the keyboard with a maximum size of 1000. The elements are input one at time alternating between A and B (ie A[0],B[0],A[1],B[1], …, A[i],B[i]) until a value of less than -1.0e6 is input or i >= 1000. Then the program continues to part b).

b) Calculates C = A + B, where + is vector addition (ie C[i] = A[i] + B[i]), and prints each element of C to the screen.

c) Calculates the minimum value of A[i] and prints it to the screen.

d) Adds the elements of B[i] and prints the result to the screen.

e) Multiplies the elements of A[i] and prints the result to the screen.

f) Using an infinite loop, determines and prints out the positive integer value of k for which the expression abs(x^k / k!) is less than 1.0e-9 where x = A[0].
